```
#import datetime
def input_expense():
    date = input("Enter date (YYYY-MM-DD): ")
    try:
        datetime.datetime.strptime(date, '%Y-%m-%d')
    except ValueError:
        print("Invalid date format. Use YYYY-MM-DD.")
        return None

    category = input("Enter category: ")
    try:
        amount = float(input("Enter amount: "))
        if amount <= 0:
            print("Amount must be positive.")
            return None
    except ValueError:
        print("Invalid amount.")
        return None

    return {'date': date, 'category': category, 'amount': amount}
expense = input_expense()
if expense:
    print(expense)
#Task 02, breakdown:
To get started;
1. Define a function to input expense details (date, category, amount)
2. Validate the date and amount
3. Store expenses as dictionaries in a list
4. Calculate totals by category
```

5. Write expenses to a CSV file#
